JOINT COMMISSION INTERNATIONAL ACCREDITATION, USA

Since November 2014, SEA Smile Dental Clinic has met the rigorous standards set forth and accredited by Joint Commission International (JCI), USA.

We are now recognized as the 1st JCI-accredited dental center in Phuket, the 5th JCI-accredited dental center in Asia, and 1 of the world's eleven JCI-accredited dental centers.

JCI is one of the largest and most respected international healthcare evaluators in the world. Accreditation is a long-term process that demands commitment. There is a great deal of preparatory work leading up to a survey and then subsequent performance and improvement work is done to ensure those accreditation standards are maintained. Organizations that achieve and maintain JCI accreditation are capable to develop and maintain those qualities.

SEA Smile Dental Clinic provides and improves the patient care and safety by following;

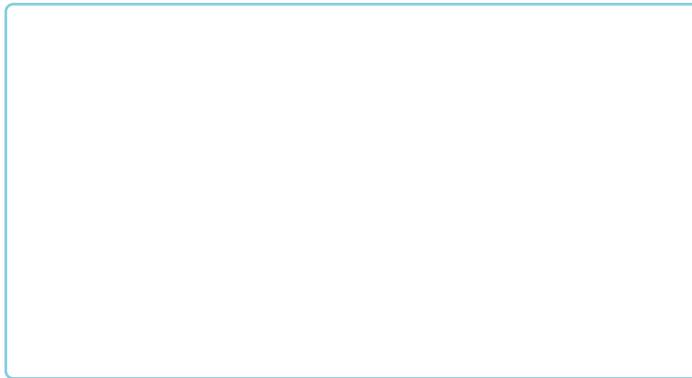

- Providing the patient care and continuity of care
- Managing for the infections prevention and control for patients and staff
- Managing the use of Medications
- Providing and managing the physical environment to support safe patient care
- Providing and Improving in quality and patient safety

ISO 9001
BUREAU VERITAS
Certification

We, one of the very few dental clinics in Thailand, have the in-house "ISO 9001 certified"

dental laboratory. We have our own porcelain oven processing units so nothing has to be sent out thus delaying your treatment. Our in-house dental lab combines hi-tech equipment with experienced dental technicians, to guarantee that all dental works are made to exact specifications.

What is CEREC?

CEREC uses photographs of your dental structure to create a 3-D digital model. With this information, we can make a custom porcelain tooth to restore damage to the natural tooth.

- **Fast**

CEREC technology is time saving and makes your dental visits quick and to the point. Rather than having to come back for numerous visits, this can be done at one or two, easy appointment.

- **Superior**

The digital imaging gives us the confidence we need to make sure your dental piece fits your mouth perfectly.

- **Permanent**

Past dental crown processes required the patients to wait out the procedure with a temporary crown. It was hard to get them to fit perfectly and was such a hassle. CEREC allows us to generate a high-quality custom dental piece for the patient and is put on immediately.

- **Attractive**

The restorations produced by CEREC are tooth-colored overlays that are hard to distinguish from your natural teeth. Crowns in the past were normally made from metal or a bulky porcelain material. CEREC crowns are durable and are non-invasive to remaining healthy tooth.

How is CEREC Work?

The digital solution for a Perfect Workflow.

- **Scan**

After a consultation by one of our dentist as what type of dental restoration is required to repair your tooth, your dentist will prepare your tooth after dental anesthesia is prepared. Once your tooth preparation is completed, the dentist will use CEREC OMNICAM/SCANNER to capture images of your tooth from various angles. At Sea Smile dental clinic we use the latest camera technology that utilizes video imaging.

- **Design**

The CEREC software facilitates the easy editing of the virtual restoration for the most reliable result. We can work simultaneously on several different restorations in the same time and the design tools can be applied to contralateral teeth in two different quadrants. This produces highly esthetic and accurate results.

- **Milling**

This latest INLAB MC XL milling unit has 5 axis of cutting , not just 3 or 4 axis of cutting like the old version, to provide you the most accurate result. The milling process can take anywhere from as little as 30 minutes (depending on the exact technology and complexity of the tooth).

Why is CEREC ?

- ✓ High-quality ceramic products.
- ✓ Minimal invasiveness.
- ✓ Less injections and discomfort.
- ✓ Fewer dental visits.
- ✓ Cost effectiveness.
- ✓ More natural tooth is saved.
- ✓ Long lasting restorations.
- ✓ Biocompatible solutions.
